Award winning high quality products

+35 years in business

Agile company: ready to react to changing customer needs

Diagnostic tests for hospitals and clinical laboratories

The majority of Reagent products are used in hospitals and clinical laboratories. Reagent was the first to introduce rapid immunoassay tests with superior performance for Hantaviruses, Tick-borne encephalitis virus (TBEV), and Lyme neuroborreliosis. Today Reagent offers a range of products for diagnostics of zoonotic infections. The product portfolio includes Reagent POC, ReaScan rapid tests and EIA tests.

Reagents and solutions for laboratories and industries

Reagent manufactures fixatives and a wide range of staining solutions for various applications, such as haematology, microbiology, cytology and pathology. Reagent also manufactures numerous Ph.Eur compliant solutions for use in quality control, production and identification. These products include buffers, stabilizers, identification reagents, controls, calibrators, standards, and indicators.

Contract manufacturing services

While Reagent is able to solve manufacturing challenges, contract manufacturing services enable our partners to focus on their core competence. Thus Reagent is a trusted industrial partner in contract manufacturing of diagnostic products, such as reagents, controls, calibrators, and EIA plates. Our success with long-standing manufacturing partnerships with industrial customers is recognized in high customer satisfaction results.

**Join us in changing
the rapid test market
and patient care paths
as well as working
towards a healthier life.**
